GAS FIRES 2018

MADE IN BRITAIN

Welcome to Global

At Global Fires we know how important it is to create a stylish and relaxing living environment. That's why we've developed this collection of versatile and affordable gas fires to complement all tastes and lifestyles.

I believe our success stems from a combination of innovative design, investment in technology and the highest quality manufacturing standards. As a result all Global fires carry a 10 year guarantee to reflect my belief in their quality and durability, and our experienced Global retailers are hand-picked to give you the very best advice and service.

This brochure has been designed to make the purchase of your new Global fire as simple as possible. I hope you will find it both informative and inspiring.

A handwritten signature in black ink that reads "Michael Jones".

Today BFM Europe is the fastest growing domestic fire producer in the country with an unequalled reputation for quality and services. Every Global branded gas fire is developed and manufactured in Britain at our purpose built, state-of-the-art facility in Stoke-on-Trent.

10 Year Guarantee

All Global gas fires carry the peace of mind of a 10 year Guarantee and the reassurance of a flame supervision device on all models. This device prevents the uncontrolled release of gas to the burner.

Our 10 year Guarantee is subject to terms and conditions including annual services and annual replacement of the oxy-pilot assembly carried out by a Gas Safe Register engineer.

Product Testing & Certification

All our gas fires are independently tested, approved and verified by the British Standards Institution (BSI) to meet the latest standards for performance, safety and efficiency.

The BSI is an independent organisation. They are not owned by the government, industry or shareholders, which means that they can be totally objective with regards testing and certification. This gives their assessments more authority than those of an organization that has a vested interest in promoting its members.

They have some of the most experienced and knowledgeable staff in the world and are recognised internationally for their technical expertise, quality services and in-depth knowledge of gas and electrical product testing and certification.

The wide-ranging capability of their testing facilities and the broad expertise and knowledge of their testing and certification staff ensures our products are rigorously tested with the utmost integrity.

Ecodesign compliant

This logo signifies that the product is fully compliant with the Eco design directive Commission Regulation (EU) 2015/1188.

Contents

Using this brochure

Before you begin please take a moment to read page 6 and establish the type of chimney or flue you have in your home and the control type which would be most suitable for your needs. As you browse through our product range you can easily identify if a gas fire is suitable for you by checking the icons on each page.

Unless otherwise stated, our hearth inset fires come complete with a Profiled trim in your choice of brass, polished silver, brushed silver or black finish. Complete the look of your chosen fire with any of our 6 stylish fret designs. You may also be able to upgrade to a different trim, or for a more modern look, one of our contemporary fascias. See pages 24-25 to find out which accessories are suitable for your chosen fire.

high efficiency

Get up to **93.5%** energy efficiency from your gas fire...

Global Fires have set new industry standards with the introduction of the high efficiency range: exceptional heat output combined with lower running costs compared to standard gas fires.

Our team has invested in developing the technology to meet the key objective of producing gas fires that save energy and as a result, help to keep costs down.

Conventional Flue Fires

Glass Fronted Fires

Saranda HE 86%..... 10

Our range of high efficiency conventional flue glass fronted fires have an energy efficiency of up to 86%. They have a glass panel across the front of the fire which radiates the heat generated from the fuel bed directly into the room. The glass panel concentrates the radiant heat so that more heat is forced into the room and less is lost through the chimney. Combined with convected heat which is produced by cool air drawn into the base of the fire through the heat exchanger and then emitted as warm air through the gap above the canopy, making these the most efficient conventional flue fires available.

Open Fronted Fires

Fantasy Plus 68.3%..... 14

Our high efficiency conventional flue open fronted fires can reach an energy efficiency of up to 68.3%. These fires provide the look and feel of a real open fire providing both radiant and convected heat. Radiant heat is emitted from the coal effect fuel bed and the convected heat is generated by cool air drawn into the base of the fire which passes through a heat exchanger and is then emitted as warm air through the gap above the canopy.

Balanced Flue Fires

Glass Fronted Fires

Fantasy BF 93.5% 18

Our range of high efficiency balanced flue fires have an energy efficiency of up to 93.5%. Designed for those who want all the benefits of a gas fire but don't have a built in chimney or flue in their home, a balanced flue fire comes with its own flue terminal which is vented directly through an outside wall. They are glass fronted, completely room sealed appliances and work by drawing and venting external air via a pair of co-axial tubes into the fire for combustion purposes.

standard fires

Conventional and Powerflue Fires

Open Fronted Fires

Corda 53.1% 20

Standard fires can achieve a direct heat output of up to 3.1kW. However these products are not suitable for use as a primary heat source.

Before you begin...

Type of Chimney or Flue

The type of chimney or flue you have dictates the type of fire you can have. But if you're not sure, then take a look at your roof and compare it with the simple guide below. It's worth remembering that a full depth fire often requires a traditional chimney or rebate on the fire surround, whilst a slimline fire will fit virtually any chimney or flue.

Brick Chimney

Apart from products designed for 'no chimney' applications, all Global products will fit brick chimneys. They are easily recognisable by a chimney stack with accompanying terracotta pot or gas terminal.

Pre-Fabricated Flue

Pre-fabricated flues are easily identifiable by a metal flue and terminal on the roof and a metal flue box behind the fire.

Pre-Cast Flue

Pre-cast flues can be identified by a ridge vent or metal flue tube and terminal on the roof. Constructed from concrete or clay blocks they form a rectangular section flue. All Global fires featuring this icon are only suitable for pre-cast flues conforming to BS EN 1858.

Can't see a Chimney or Flue?

If you can't see a chimney or flue like the ones described above, then you will require either a Balanced Flue, a Powerflue or an electric fire.

Powerflue

Powerflue fires use an electronically driven fan unit inset on the external wall to expel the flue gases directly outside the building.

Balanced Flue

Balanced Flue fires use a horizontal pipe to vent directly outside. An electricity supply is not required for Balanced Flue products.

Controls

Manual Control

Simple and discreet. The control system is located behind the fire's fret or trim. Once the fire is lit rotate the control knob to adjust the flame height and heat output.

Slide Control

A convenient control system which is located on the top right-hand side of the fire. Push and hold the lever down to ignite and move it up and down to adjust the flame height and heat output.

Easy Flame Control (EFC)

Discreet, easy access buttons are used to ignite the fire and adjust heat and flame height.

Remote Control

The remote control handset is used to light the fire as well as to adjust the flame height and heat output.

Remote Control with Thermostat

The remote control handset can be used to light the fire as well as to adjust the flame height and heat output. In addition, the handset contains the extra benefit of a thermostatic control to regulate room temperature and a programmable timer that can be pre-programmed to ensure your room will be warm whenever you wish.

Wall Inset – Glass Fronted

Delta HE

This portrait hole-in-the-wall fire features a striking polished silver fascia and a 3.4kW heat output. The Delta HE wall inset is the ideal solution for smaller rooms where space is at a premium.

The glass fronted Delta HE is operated by thermostatic remote control and comes with a coal fuel bed. A pebble fuel effect is available as an optional extra.

Passion HE

The Passion HE is a beautiful gas fire with a truly authentic looking log effect fuel bed. With its large viewing window it features stunning flame motion that captivates as it dances and reflects in the glossy black enamel interior.

For optimum aesthetics this fire can be supplied with non reflective glass that provides an astonishingly crystal clear view of the fuel bed. For comfort and performance choose our fully automatic and thermostatic remote control option. A manual control version is also available.

Passion HE with Ultimo 007 fascia in Gold

Also available in Black Nickel and Silver finish

The Passion HE is available with a choice of specifically designed contemporary one-piece fascia options, the Ultimo 007 in three colour finishes, gold, black nickel and silver, and the Provence cast iron fascia in black.

For a more traditional two-piece arrangement we have introduced a uniquely designed Bauhaus 151 fret. Combine this with the tasteful Ultimo trim to further complement the wide viewing angles of this fire. Alternatively you can combine this fret with other Global trim options – see page 24.

Global Powerflue Fires

A gas fire creates a welcoming heart to any living room but many newer homes are being built without a chimney or flue so a conventional gas fire is not an option.

However, powerflue (PF) gas fires have been specifically designed for homes without a conventional flue system providing a gas fuelled alternative heat source to an electric fire or radiator.

The Fantasy Powerflue fire is flued from the rear of the fire and is suitable to be installed on a maximum flue length of 5 metres and 3 bends.

The Global Slimline Fan System fully recessed into an outside wall leaving only a discreet 3" projection. 96mm and 183mm spacers are available if required.

Powerflue Installation Possibilities

Example of powerflue installation

An example of a powerflue installation using three bends.

An example of a standard powerflue installation. The gas fire is flued directly through an outside wall via a straight, horizontal length of flue.

An example of a powerflue installation using a vertical section of flue pipe and two bends.

Fantasy Powerflue Dimensions

Please note, if required, more detailed information regarding technical specification is available from your Global stockist.

WARNING BFM Europe Limited is a Gas Safe Register company. We recommend that all of our fires are installed by Gas Safe Register engineers in accordance with our instructions. DISCLAIMER Our policy is one of constant development and improvement. We therefore reserve the right to revise designs and specifications of our products without formal notice, patents pending. We always recommend our products be viewed in an approved showroom before purchase. Whilst we have taken every care in the preparation of this brochure it is not intended to replace the installation manual which provides more detailed information. Photography is for illustration purposes only and although every effort has been made to ensure accurate reproduction of typical installations and flame pictures they may vary according to fire model and flue types. We accept no liability for any loss or damage arising directly or indirectly from the use of this brochure. We recommend that all our fires are used in conjunction with central heating and not as a primary source of heat. In the interests of personal safety a suitable fireguard is recommended when children, the elderly and the infirm are present.
