BRITISH MANUFACTURING

Historically green efficient stoves

Welcome to Portway Stoves

At Portway Stoves we know how important it is to create a stylish and relaxing living environment. That's why we've developed this collection of Multifuel, Wood and Gas Stoves to complement all tastes and lifestyles.

I believe our success stems from a combination of innovative design, investment in technology and the highest quality manufacturing standards. As a result I have total confidence and belief in the quality and durability of the product range, and to ensure you receive the very best advice and after sales service, our experienced Portway retailers are fully trained to assist you with your purchase. This brochure has been designed to make choosing your new Portway stove as simple as possible.

I hope you will find it both informative and inspiring.

Charles Portway the founding father of energy efficiency

In the early 1800s the owner of an ironmongery store took inspiration from the very first enclosed metal stoves which appeared in North America at the end of the 1700s and custom built his own stove to heat his Halstead based store.

Soon, a neighbouring shopkeeper asked Charles Portway to build him a stove to heat his store. Shortly afterwards he set up a small foundry manufacturing his Portway solid fuel stove. The stoves became highly successful and remained a very similar design until the 1980's.

The beauty behind the success of Portway's stoves was in their efficiency and they burned so slowly that they extracted the maximum amount of heat from the fuel.

They were named 'Tortoise' stoves and proudly produced with the motto 'Slow but Sure' displayed on the front. These were the first heating appliances to offer fuel efficiency as a major selling point making their role in the development of our industry of great significance today. Robert Higgs, the chief executive of the Heating and Ventilating Contractors Association argues that Portway was the "founding father of energy efficiency".

Portway's stoves were used to heat churches and halls as well as homes and 19th Century stoves displaying the iconic 'Tortoise' trademark can still be found today, making them one of the oldest, most resilient products in the history of heating.

BRITISH MANUFACTURING

Complete peace of mind

Portway stoves are designed, manufactured, tested and independently approved to British Standards. The Portway brand holds a reputation for excellent quality, operational reliability, and high performance efficiency. Our stoves are reliable and efficient, that is why we offer a 10 Year Guarantee for complete peace of mind reassurance.

Tested & Approved

All Portway solid fuel stoves are independently approved tested to BS EN 13240 or BS EN 13229, with many approved by HETAS, the official body recognised by Government to approve solid fuel heating appliances. We always recommend you use an experienced HETAS approved installer to fit your stove. To learn more about HETAS and find details of HETAS registered installers visit www.hetas.co.uk

Product Testing & Certification

Our Gas stoves are independently tested to BS EN 613, approved and verified by the British Standards Institution (BSI). BSI is an independent organisation and are internationally recognised for their technical expertise, quality services and in-depth knowledge of gas and electrical testing certification. The wide-ranging capability of their testing facilities and the broad expertise and knowledge of their staff ensures our products are rigorously tested with the utmost integrity.

Ecodesign 2022

Portways next generation of Clean Burn Stoves deliver exceptional standards for fuel efficiency and ultra-low emissions. These high performance stoves ensure smoke emissions and particulates are minimised to exceed impending clean air environmental restrictions for installation suitability into urban and rural areas.

DEFRA Smoke Control Exempt

Exemption is only given to independently tested appliances that demonstrate excellent clean burning combustion standards when burning wood and authorised smokeless fuels in a Smoke Control Area. Portway Stoves are so efficient and clean burning they have received the Clean Air Act Approval from DEFRA. Portway Stoves can also be used in smoke free zones in the Republic of Ireland when burning wood or peat briquettes.

Ecodesign Compliant

This logo signifies that Portway Gas products are fully compliant with the Eco design directive Commission Regulation (EU) 2015/1188.

Solid Fuel Stoves

Multifuel and Woodburning Stoves carry a 10* year guarantee against material and manufacturing defects on the stove body. Cast iron parts are guaranteed for 2 years. Consumable components and glass parts are guaranteed for a period of 1 year against material defects, and are subject to the terms and conditions as specified in the guarantee document supplied with the product. *Dalton Multifuel 5 year Guarantee.

Gas stoves

Gas stoves carry a 10 year guarantee against manufacturing and material defects including parts and labour, and is subject to Portway's conditions of guarantee. These include an annual service and annual replacement of the oxy-pilot assembly.

Features at a Glance

Portway stoves have been built with the following design and functionality features.

Ultra slim, wide capacity

All Multifuel Stoves have been specifically designed to be ultra-slim in depth allowing them to be easily installed into existing fireplaces without the need for a protruding hearth. A large width allows for logs of 250mm

Flue outlet

Our free-standing stoves can be flued from the top or the rear and connect to standard 125mm (5") or 150mm (6") stove flue pipe. Dalton top flued only.

Stove lining

A high density vermiculite lining for perfect combustion acting as insulation to limit the loss of heat through the back and sides of the stove and directs it through the front and towards the centre of the room.

Airwash system

A pre-heated Airwash system keeps the glass window clean and clear by passing a stream of intensely hot air down the inside of the glass preventing flames and combustion particles from having contact with the window.

Easy ashpan handling

Each stove has been designed to include an easy access, easy carry ashpan to make the disposal of ash as simple and mess free as possible. Ashpan not required on Luxima and Arundel XL MK2 Wood models.

Secure fixings

Bolt fixings are safely and securely fixed to the hearth before being fastened to the stove.

Top quality finish

Our Portway steel stove bodies are made from 5mm thick steel and are one of the toughest, most robust on the market. Portway cast iron components are made from the finest quality cast iron. All stoves are finished with black paint. We are so confident in the quality of all our stove bodies that we guarantee them for 10 years.

Large viewing window

The generous width provides a great flame viewing area for you to enjoy the mesmerising and calming effect of real burning flames.

Quaternary* and Tertiary Air System

Our quaternary and tertiary air supply uses the pressure difference generated inside the stove to draw in air at very high velocity through precision laser-machined spiracles. Fuel smoke particles are reignited in mid-flight causing additional flame combustion generating more heat and emitting fewer harmful chemicals into the atmosphere.

*Luxima model only

Simple operating controls

Heat output can be easily adjusted using simple and reliable aeration control.

Soild Fuel Stoves

Harnessing the power of nature by burning natural fuels, Portway's range of Multifuel and Woodburning Stoves are dependable, clean burning appliances designed to provide your home with an effective controllable level of heat.

The benefits of running a solid fuel stove are numerous.

Environmental sense

Burning wood is friendly to the environment. Choosing wood to heat our homes helps us to preserve fossil fuel levels and protect valuable earth resources for our future. Replanted trees grown for fuel provide a healthy self-sustaining fuel source, and a positive way to reduce CO2 emissions that are harmful to the environment. Using correctly seasoned wood will increase heat output. New timber is not recommended as it carries excessive moisture and can produce unwanted smoke emissions.

Naturally efficient

Portway's R&D team has invested in developing and refining technology to meet the key objective of producing stoves that not only save energy but, as a result, keep running costs down. Our stoves carry a minimum Class A rating with energy efficiencies of up to 84%.

To achieve the cleanest burn time with maximum efficiency performance we recommend burning natural hard wood logs, and manufactured approved smokeless fuels. Portway stoves can also burn a wide range of other fuels including anthracite, peat briquettes, and other mineral fuels.

Genuine warmth

Portway Multifuel and Woodburning Stoves will provide you with warmth like no other energy source.

Every burn period produces long lasting radiant heat that will maintain your comfort levels whilst returning high efficiency with low emissions when burning natural and renewable fuels.

Gas Stoves

For immediate warmth and comfort a Portway gas stove will fit right into your busy lifestyle providing instant heat with no mess, no fuss and no reloading of fuel. At the push of a button you can instantly create a warm and welcoming atmosphere.

Easy to use

Controllability with convenience. Fuss free with no mess. Just a few of the many advantages of installing a High Efficiency gas stove from Portway. Operated by a fully automatic remote control handset, you set the temperature you want in your room whilst enjoying a highly realistic log fuel bed and flame pattern giving the look and feel of a real wood burning stove. Simple.

Efficiency

Our R & D team continually develop gas technology to achieve the highest possible efficiency standards. Our gas stoves are designed for simple installation into homes with or without a conventional chimney or flue, and can achieve impressive energy efficiencies of up to 84.2%.

Portway is a brand with heritage and a reputation for the build quality and reliability of our appliances. BFM Europe has always had a reputation as a manufacturer of some of the most efficient gas fires on the market and now we are setting new industry standards with the Portway range of High Efficiency gas stoves - exceptional heat output combined with lower running costs compared to standard gas stoves.

Safety

Your safety is our concern. All Portway products undergo rigorous testing and certification designed to both meet and exceed current legislation and, more importantly, to give you complete peace of mind.

Our stoves are independently tested, approved and verified by the British Standards Institution (BSI) an independent testing authority recognised internationally for their technical expertise, quality services and in depth knowledge of gas testing and certification.

In addition, our gas stoves carry independently tested CE Approval to standard BS EN 613 and are fully compliant with the Eco design directive Commission Regulation (EU) 2015/1188.

See page 5 for more information.

Arundel

Multifuel Stove

The Arundel has been developed with aesthetics, efficiency and flexibility in mind. This robust steel bodied Multifuel stove has modern looks with a large clear viewing window that will provide plenty of lively flames. Suitable for most room settings the Arundel offers a heat output of 5kW and an energy efficiency of 82.5% allowing it to be both cost effective and heat efficient. The Arundel is suitable for use in Smoke Control Areas, as recommended by DEFRA.

FEATURES

- + 5mm thick steel body
- + Cast Iron door and grate
- + Large viewing window
- + Simple operating controls
- + Slim depth installation
- + Tertiary air supply
- + Clean glass Airwash system
- + Large easy-carry ashpan
- + Takes log lengths up to 250mm (10")
- + 125mm (5") top or rear flue connection
- + Approved to standard BS EN 13240
- + DEFRA Smoke Control Exempt
- + EU Clean Stove Standard
- + Weight - 74kg

OPTIONAL EXTRAS

- + Stove Thermometer
- Options & Accessories page 32-33.

Intelligent design

Portway stoves are amongst the cleanest, most efficient and most easily controllable stoves available today.

high efficiency

Our stoves carry a minimum Class A rating with a maximum energy efficiencies of up to 84%.

Our stoves have been specifically engineered to be simple in design, easy to use and still produce the lowest levels of carbon monoxide emissions, making them exceptionally clean burning.

The Portway Stoves range is specifically engineered to be simple in design, easy to use and produce the lowest levels of carbon monoxide emissions. The result is a collection of beautiful looking and exceptionally clean burning appliances.

All stoves need air to breathe. There must be a permanent fresh air supply into the space in which it is installed equal to 550mm for each kW of nominal output. This can often be provided by natural drafts or air leaking around door frames etc. It is commonly accepted that this alone may suffice for appliances up to 5kW, but in any case of doubt, fit a purpose-made air vent. Consult with your Hetas installer for more advice on adequate ventilation and the requirements of a Carbon Monoxide monitor.

Portway 1 & 2 models offer a Direct Vent Kit* which means that the correct amount of ventilation is drawn directly into the stove without the need for any additional draughty and unsightly airbricks. Please ask your stockist for further details. Portway's design success can be merited to over 150 years of experience and a dedicated team of research engineers who are amongst the brightest in the industry. As a result our solid fuel stoves are approved using the most sophisticated research and test systems in the industry. Each stove is made from 96% easily recyclable material and all cast parts, such as doors and grates, are manufactured from 70% recycled iron.

*Can only be used when the stove is installed against an external wall.

BFM Europe Limited, Trentham Lakes, Stoke-on-Trent, Staffordshire ST4 4TJ

WARNING BFM Europe Limited is a Gas Safe Registered company. We recommend all our gas stoves are installed by a Gas Safe Registered engineer, and all Multifuel or Wood burning stoves are fitted by a HETAS registered engineer, in accordance with our installation and user manuals.

DISCLAIMER Our policy is one of constant development and improvement. We therefore reserve the right to revise designs and specifications of our products without formal notice, patents pending. We always recommend our products be viewed in an approved showroom before purchase. Whilst we have taken every care in the preparation of this brochure it is not intended to replace the installation manual which provides more detailed information. Photography is for illustration purposes only and although every effort has been made to ensure accurate reproduction of typical installations and flame pictures they may vary according to stove model and flue types. We accept no liability for any loss or damage arising directly or indirectly from the use of this brochure. We recommend that all our stoves are used in conjunction with central heating and not as a primary source of heat. In the interests of personal safety a suitable fireguard is recommended when children, the elderly and the infirm are present.

This brochure is copyright 2022 and must not be reproduced in whole or in any part without prior written permission. Thank you to Olde England Reproductions (OER) for supplying fire surrounds used in the production of this brochure.
