Woodburning and Multi-fuel Stoves

Featuring the latest product releases

From our hands to your home...

A Stovax stove is the sum of over 40 years of British design and engineering. Designed to not only provide a deep, warming heat for your home, each brings with it both character and individuality. Whether you opt for one of our traditional or contemporary designs, our obsessive attention to detail ensures our stoves are as refined on the outside as they are innovative on the inside.

Forged to Last

Our woodburning and multi-fuel stoves are innovatively designed, solidly built and meticulously tested to ensure they continue to heat your home for many years to come.

Innovation in Design

With creativity and innovation at the heart of what we do, our expert design team continues to create unique, industry leading stoves that both inspire and endure.

From the moment the first concept is sketched by hand, through to the mapping of airflow in the combustion chamber using cutting-edge software, stove design is a science we have been perfecting since 1981.

We continually invest in our research and development facilities to ensure our team is at the forefront of fire design. Our pioneering concepts and technologies make our woodburning and multi-fuel models some of the most sought after stoves available.

We are proud to have been recognised as an award-winning manufacturer, for our high-quality products and innovative technology. Find out more at stovax.com/awards

Quality Construction

Built with the finest quality materials, each stove is engineered here in the UK. Doors shut reassuringly to form an airtight seal, and air controls slide home both easily and responsively – year after year.

Cast iron and heavy gauge steel are used across our ranges to ensure each stove is built to the highest tolerances.

Possessing excellent thermal qualities, cast iron allows for the casting of intricate designs, making it perfect for traditional stoves. Heavy gauge steel is also an outstanding choice for stove construction, offering greater scope for design thanks to its versatile nature.

Rigorously tested

In our pioneering laboratories, each stove is put through a series of demanding tests to make sure it performs not only reliably but exceptionally.

Here our development engineers continually refine our products to exceed the toughest UK and European standards, ensuring they are some of the cleanest burning and safest stoves available.

The Stovax Heating Group itself is also subject to stringent tests and we are proud to be an ISO9001 and ISO 14001 accredited company; recognised for our continued commitment to technical innovation, high quality products and excellent customer and after-sales care.

A full-page background image of a forest. Sunlight filters through the trees, creating a warm, golden glow. The forest floor is covered in fallen leaves and low-lying vegetation. The trees are tall and slender, with their trunks visible in the foreground and background.

A Modern and Natural Answer to Home Heating

Burning wood for heat has many benefits, and when burnt responsibly on a high efficiency Stovax stove it offers a natural, sustainable off-grid solution to home heating.

Wood or Multi-fuel?

All Stovax stoves are designed for high efficiency woodburning. Stoves that burn only wood have a burn chamber with a flat bed, as wood burns best on a bed of ashes.

Multi-fuel stoves burn logs but also give you the freedom to burn smokeless fuels with equally high efficiency. Depending on the model, the stove's robust riddling grate can be opened or closed, allowing ash to be easily riddled into a built-in ash pan below. This allows air to flow under the fire to create the optimum conditions for burning these solid fuels.

Natural Heat

Unlike fossil fuels, wood releases approximately the same amount of carbon into the atmosphere as that absorbed during its growth, making it a virtually carbon neutral heat source.

Choosing one of our high efficiency low emission stoves is a great step towards burning responsibly. To ensure your stove provides optimum heating performance, only wood with a low moisture content should be burnt. Seasoned logs should be allowed to dry for at least two years or more to achieve a moisture content below 20%, which can be easily checked with a moisture meter. When purchasing seasoned or kiln dried wood, look for the Woodsure "Ready to Burn" certification which guarantees logs will have less than 20% moisture.

Good quality dry wood will not only provide a higher heat output than that of freshly felled timber, it will also avoid a build-up of tar in your flue and ensure low smoke emissions with clean and crisp flame visuals.

STOVAX

To learn more about how to burn clean, visit **stovax.tv** to view our instructional videos.

Designed for our Environment

When you choose to heat your home with a Stovax stove, you are choosing an environmentally designed product. Our high efficiency Ecodesign technology is engineered to generate the maximum amount of heat from your fuel, with minimal emissions.

High Efficiency

All Stovax stoves have been designed to burn with high thermal efficiency, minimising the loss of heat energy during combustion. Every model in this brochure is subject to UK energy labelling standards and almost all are rated as either A or A+ energy class appliances. Energy class and efficiency information is listed on each stove's product page for easy reference.

Urban Area Approved

Most town and city homes are located in Smoke Control Areas. To burn logs in these locations, the stove installed must be granted exemption from these restrictions by the government through DEFRA.

This exemption is given only to appliances which have been independently tested to demonstrate particularly clean burning combustion. All stoves in this brochure are DEFRA exempt for use in Smoke Control Areas (when the appropriate smoke control kit is fitted and used in accordance with the product operating where specified) and this is shown on each product page. Your Stovax retailer can give you further help and advice.

Ecodesign Plus

Whilst all of our stoves feature Cleanburn technology for high efficiency heating in Smoke Control Areas, they also meet, and in many cases even exceed, Ecodesign emission and efficiency standards. Our Ecodesign products represent the cutting-edge of low emission stoves, reducing particulates by up to 84% in comparison with old appliances.

Ecodesign aims to improve air quality. Stove manufacturers are only able to sell Ecodesign compliant appliances. All of our Ecodesign stoves and those of our distributed brands have been verified as meeting the stringent air quality and efficiency standards of the Ecodesign directive, and can be found displaying our Ecodesign Plus label. This helps you easily see which products meet these standards for ultra-low emissions.

We believe this is the future of solid fuel heating, which is why the Stovax Heating Group is proud to offer the largest range of Ecodesign wood and multi-fuel stoves and fires in the UK and Ireland. Visit www.stovax.com/ecodesign for our complete range.

*For further information on our Ecodesign Plus stoves please see page 80.

Complete Peace of Mind

Expert Retailer Network

We take great care to ensure that our stoves are designed, tested and manufactured to the highest possible quality and safety standards. It is just as important to us that they are sold and installed correctly, so that you get years of enjoyment from your purchase.

Accordingly, you will find our products are only available from experienced, independent retailers who will be happy to show you a selection of models locally in their showrooms, often burning.

These independent retailers will help you with your individual requirements, both technical (such as sizing the heat output to your room and advising on your flue type) and design, to ensure that you select the right stove for your home. They will also be able to advise on or help with the installation of your stove, as well as help provide any after-sales support and servicing your appliance may require in the future.

Whilst we encourage our retailers to promote fireplace products and their outlets via the internet, we do not believe suitable levels of customer care and satisfaction can be obtained from purchasing the product only online and we would strongly recommend that you consider this when undertaking your research and making a purchasing decision. Furthermore, please be aware that we do not offer technical support (beyond our statutory responsibilities) to products bought via nationwide online sales, where this support would normally be offered by one of our qualified, independent retailers.

You can find your nearest retailer by visiting:
www.stovax.com/retailers

Five Year Extended Warranty

When you purchase a Stovax stove from our Expert Retailer Network your retailer will provide you with a Five Year Extended Warranty for your new solid fuel stove, provided it is registered with Stovax (see page 87). Stoves purchased outside of Stovax's Expert Retailer Network will carry a standard non-extendable One Year Warranty, or minimum statutory warranty for your country. Full warranty terms & conditions are available to view at **www.stovax.com**

WIN the cost of your product back!

by registering your product online for your free extended warranty. See page 87 for details.

High Performance Heating

The Stovax woodburning and multi-fuel stove ranges include a wide range of different styles and sizes to suit your home. Each stove collection is designed and engineered here in Great Britain and features cutting-edge combustion systems with easy to use controls. The result is a stove that gives you stunning flames and high performance heating.

Top or rear flue pipe exit

Warm air channels between the firebox and the outer walls of the stove and back into the room for enhanced heating performance.

Powerful Airwash system cleans glass for a superb view of the flames.

Baffle system ensures minimal heat is lost up the chimney

Integral Heat shields - lower temperatures behind the appliance for reduced distance to combustibles.

High density thermal brick lining for high efficiency heating

Radiated heat warms room.

Dedicated woodburning / Multi-fuel riddling system

Optional External Air Facility for draught reduction (selected models)

Triple airflow system employs heated air jets to ignite hydrocarbons for stunning flame visuals and high efficiency clean burning
Easy to use, responsive control system

Airtight door with large viewing window

Plinth, log store bases or stove bench styling options for elevated flames

High quality construction using the finest materials possible

Many stoves in this brochure are designed to be suitable for installation with a 12mm hearth (selected models). See page 83 for more information.

Traditional Stoves

Our traditional stoves combine classic casting details with modern combustion technology. Timelessly styled, they add elegance and character to period and contemporary interiors alike.

Exceeding Ecodesign

Designed with the very latest firebox engineering, our Ecodesign Plus woodburning and multi-fuel appliances represent the cutting-edge of stove design. Their low emission, high efficiency combustion systems ensure that substances present in smoke emissions such as Carbon Monoxide (CO), nitrogen oxides (NOX), organic gaseous compounds (OGC) and particulates (PM) are minimised.

Thanks to their eco-focused design, all Ecodesign stoves easily pass Smoke Control Zone requirements making them suitable for installation in urban and rural areas alike.

Total Efficiency - %

Balancing a stove's efficiency with cleanliness of burning is a precise science, requiring expert engineering and meticulous testing. All our Ecodesign Plus stoves surpass the 2022 Ecodesign Efficiency target of 73%, resulting in a range of truly environmentally designed products.

PM (Particulate Matter) mg/m³

Although PMs are currently measured for UK smokeless zone requirements, Ecodesign emission requirements are much tighter. Our Ecodesign stoves burn well below these future, tougher, PM targets, with some models generating almost two thirds less than the permitted PM emission amount of 40 mg/m³.

WB = Woodburning. MF = Multi-fuel

*Multi-fuel Vogue, Chesterfield & Sheraton model figures quoted burning smokeless fuel

NO_x (Nitrogen Oxides) mg/m³

Nitrogen oxides affect air quality and are another emission requirement of Ecodesign. All Stovax Ecodesign stoves demonstrate NO_x emissions that are well below the permitted amount.

OGCs (Organic Gaseous Compounds) mg/m³

Minimising OGCs is also an important requirement of forthcoming 2022 Ecodesign standards. All Stovax Ecodesign stoves fall comfortably below this exacting emission target.

CO (Carbon Monoxide) % @ 13% O₂

Ecodesign limits are set to dramatically reduce the current UK Carbon Monoxide emission limits by a massive 88%, from 1% @ 13% O₂ to 0.12%. All Stovax Ecodesign stoves meet this stringent standard.

WB = Woodburning. MF = Multi-fuel

*Multi-fuel Vogue, Chesterfield & Sheraton model figures quoted burning smokeless fuel

Further Information

Stovax Heat Shields

Stovax offer a range of highly effective Heat Shields for the Vogue stove range. These fantastic additions will allow a reduction in the distance to combustible materials at the rear and sides of the stoves as shown below. The Stovax Heat Shields not only maximise the available space within the room, but they also enable you to accommodate a wider range of materials in your interior design. For more information, please speak to your local Stovax retailer.

Stove	Product Code	Distance from sides	Distance from rear
Vogue Small	VG-SMHSK-E	350mm	100mm

County 8	500mm	300mm*

* To achieve this clearance a Flue Shield must be used in conjunction with Twin Wall Flue Pipe.

Dedicated External Air Supply

Designed from conception to be airtight, some of our stoves including Chesterfield, Sheraton & Vogue stoves can be optionally installed with a dedicated external air supply, meaning they do not need to draw any air from the room. This potentially negates the need for an additional air vent, therefore minimising drafts.

The Futura 5 and Huntingdon 30 stoves come ready to be installed with an external air supply, without the need for an additional bespoke kit. Thanks to their built-in air connections, all that is needed for these stoves to take combustion air from the outside of your property is to be connected to an external air pipe.

Enamelled Flue Pipe

Our range of high quality flue pipes offer further installation options for your stove as well as optimum heating performance. The flue pipe diameters required for each model are shown on individual product pages.

5" Diameter	
250mm Straight without door	998-145
500mm Straight without door	998-156

Care of your Stove

To help you get the best performance from your stove and keep it in good condition, inside and out, Stovax offers a wide range of cleaning and maintenance products. Your Stovax retailer will be able to give you full details or you may view the complete range at **www.stovax.com**.

Brochure Photography

All of the flame pictures shown in this brochure are taken from real fires. Please note however, that flame pictures will vary depending on the exact fuel used, flue conditions and surrounding geographical features. Given that building regulations are subject to change, some of the photography in this brochure may not comply with the requirements of the latest Building Regulations. You should always check your proposed installation arrangement with your approved competent person of solid fuel installations before proceeding and observe the minimum distance to combustible materials as stated in the installation instructions.

Some of the installations in this brochure are dependant on the use of heat shields to reduce the required separation from combustible material.

Important Safety & Technical Information

We recommend that an approved competent person of solid fuel installations should undertake a site survey prior to purchase and it is a requirement that any Stovax Stove should be installed by an appropriately qualified approved installer.

All fires and stoves consume air as they burn. To comply with Building Regulations (Document J) you may need to install a fixed air vent to ensure adequate ventilation. Your Stovax retailer or approved competent person of solid fuel installations will be able to advise on this. Furthermore, by law all installations also require a Carbon Monoxide monitor (such as product code 3045 available from Stovax).

You can also download detailed installation instructions prior to purchase from **www.stovax.com**.

Please note that all parts of these stoves, particularly the glass panel in the door, become extremely hot during operation and can result in serious injury and burns if touched. It is therefore recommended that a fireguard complying with the current version of BS 8423 is used in the presence of young children, the elderly or infirm.

Chesterfield 5 woodburning Ecodesign stove with optional long legs. Shown with ceramic wood-effect beam.

Product Improvement and Warranty Information

Stovax pursue a policy of constant product improvement. Products supplied may therefore differ in specification from those illustrated or described in this brochure, and you should always check the final specification with your Stovax retailer.

Your Stovax Expert Retailer will provide you with a Two Year Warranty for your new solid fuel stove. This can then be extended to a five year warranty, provided it has been registered with Stovax. During the registration process, the Expert Retailer details will be required for your Extended Warranty to be activated. Please note, this warranty excludes certain consumable parts and is dependant on your appliance being serviced by an appropriately qualified person 12 months after installation and annually thereafter. Stoves purchased outside of Stovax's Expert Retailer Network will carry a standard 12 month, non-extendable warranty, or minimum statutory warranty for your country. Full details of this warranty is set out to view on our website at

www.stovax.com.

WIN

the cost of your product back!*

For further home inspiration you can **view real life installations** at our Customer Showcase page and share your thoughts and photos of your new stove or fire installation to enter our draw!

The Stovax Heating Group is proud to offer a premium collection of fires and stoves from luxury brand, Onyx.

Onyx offers a captivating and esteemed collection that delivers the ultimate in heating technology. Each product is meticulously designed to employ layer upon layer of visual enjoyment, offering not only a focal point, but an entire immersive experience.

This showroom exclusive brand is available from a carefully selected group of Approved Onyx Retailers. Find out more about the brand and the range of extraordinary fires and stoves at www.onyxfires.com

Onyx Avanti 150RW with Split Oak Log-effect, installed as a two-sided electric fire. Shown with optional Mood Lighting System.

Have you considered gas and electric?

Many of the stoves in this brochure are also available in gas and electric versions. Offering all the ambience of a woodburning model, these innovative stoves provide superb flame visuals at the touch of a button.

Gazco Gas Loft with Steel Log Store Base and Top Section.

Our gas and electric division, Gazco, design and build stoves that look and feel every bit as solid and authentic as our solid fuel stoves. This is because they are built with the same high quality materials and craftsmanship.

On the inside, cutting-edge technologies allow these advanced stoves to create captivating flame visuals, complemented by hand-painted fuel effects for breath-taking realism. And with various handset options, each model can be easily controlled from the comfort of the sofa.

For more details, ask your local retailer or visit www.gazco.com to view the complete range.
