Gas Fires
2023/24

BRITISH MANUFACTURING

At the heart of your home

Welcome to Flavel

BFM Europe
BRITISH FIRE MANUFACTURERS

Today BFM Europe is the fastest growing domestic fire producer in the country with an unequalled reputation for quality and service. Every Flavel branded gas fire is developed and manufactured in Britain at our purpose built, state-of-the-art facility in Stoke-on-Trent.

Every model* carries the peace of mind of a 7 year guarantee and the reassurance of the Flavel Airwatch System on all living flame effect fires. This device immediately cuts off the gas supply in the unlikely event of the flame being extinguished through blockage.

Our 7 year guarantee is subject to terms & conditions including annual services carried out by a Gas Safe Register engineer and annual replacement of the oxy-pilot assembly (or thermocouple on balanced flue models).

At Flavel we know how important it is to create a stylish and relaxing living environment. That's why we've developed this collection of affordable gas fires to complement all tastes and lifestyles. I believe our success stems from a combination of innovative design, investment in technology and the highest quality manufacturing standards. As a result all Flavel gas fires carry a 7 year guarantee to reflect my belief in their quality and durability.

This brochure has been designed to make the purchase of your new Flavel gas fire as simple as possible. I hope you will find it both informative and inspiring.

Michael Jones

Flavel products are fully compliant with the Eco design directive Commission Regulation (EU) 2015/1188.

All our gas fires are independently tested, approved and verified by the British Standards Institution (BSI) to meet the latest standards for performance, safety and efficiency.

The BSI is an independent organisation. They are not owned by the government, industry or shareholders, which means that they can be totally objective with regards testing and certification. This gives their assessments more authority than those of an organization that has a vested interest in promoting its members.

They have some of the most experienced and knowledgeable staff in the world and are recognised internationally for their technical expertise, quality services and in-depth knowledge of gas and electrical testing and certification.

The wide-ranging capability of their testing facilities and the broad expertise and knowledge of their testing and certification staff ensures our products are rigorously tested with the utmost integrity.

high efficiency

Get up to 93.5% energy efficiency from your gas fire...

Flavel is a British manufacturer with a reputation for excellent quality gas fires. Our R&D team continue to invest in developing new technology to produce gas fires that save energy and as a result, help to keep costs down.

The Flavel high efficiency range combines exceptional heat output with lower running costs compared to standard gas fires.

Conventional Flue

Glass Fronted

Our glass fronted high efficiency conventional flue fires have an energy efficiency of up to 86.3%. The glass panel across the front which concentrates radiant heat generated from the fuel bed and forces it directly into the room with less heat lost through the chimney. Convected heat is also produced by cool air drawn into the base of the fire through the heat exchanger and then emitted as warm air through the gap above the canopy, making these the most efficient conventional flue fires available.

Open Fronted

Our open fronted high efficiency conventional flue fires can reach an energy efficiency of up to 68.3%. These fires provide the look and feel of a real open fire providing both radiant and convected heat. Radiant heat is emitted from the coal effect fuel bed and the convected heat is generated by cool air drawn into the base of the fire which passes through a heat exchanger and is then emitted as warm air through the gap above the canopy.

Balanced Flue

Glass Fronted

Our glass fronted high efficiency balanced flue fires have an energy efficiency of up to 93.5%. Designed for those who want all the benefits of a gas fire but don't have a built in chimney or flue in their home, a balanced flue fire comes with its own flue terminal which is vented directly through an outside wall. They are glass fronted, completely room sealed appliances and work by drawing and venting external air via a pair of co-axial tubes into the fire for combustion purposes.

Fires for every home

What type of Flavel fire will suit your home best?

From traditional to contemporary, slimline to full depth, we have models to suit all types of situation and installation. There is a Flavel fire to make anywhere feel like home.

Browse through the fire options below, then use the guide on page 6 to help you identify which type of chimney or flue you have. Every product page displays icons to identify flue suitability, fuel type, control options, and more.

Wall Inset

To complement a contemporary home choose a wall inset product, otherwise known as a hole-in-the-wall fire. We have models available for all chimney and flue types.

Hearth Inset

A hearth inset fire saves space as it is recessed into the chimney breast or flue. Available in a choice of slimline or full depth fuel beds, with balanced flue options for homes without a chimney or flue.

Fireplace Suite

A Suite really makes a statement in a room and comes complete with the surround and gas fire suitable for conventional as well as balanced flues.

Wall Outset

This type of fire has a direct connection to the flue and is fitted onto the wall with minimal building work required. A virtually hassle-free installation, and a perfect complement to homes requiring performance and aesthetics.

Hearth Outset

Set onto a hearth this type of fire takes a more prominent position in a room with some models offering the option of side windows so that the flame pattern can be seen from wider angles.

standard fires

Standard fires can achieve a direct heat output of up to 3.1kW. It is recommended that these products are not suitable for use as a primary heat source, but are ideal if you are looking for a great fireplace feature for occasional use.

Before you begin

Type of Chimney or Flue

The type of chimney or flue you have dictates the type of fire you can have. If you're not sure, then take a look at your roof and compare it with the simple guide below. It's worth remembering that a full depth fire often requires a traditional chimney or rebate on the fire surround, whilst a slimline fire will fit virtually any chimney or flue.

Brick Chimney - Class 1 Flues

Apart from products designed for "no chimney" applications, all Flavel products will fit brick chimneys. They are easily recognisable by a chimney stack with accompanying terracotta pot or gas terminal.

Pre-Fabricated Flue - Class 2 Flues

Pre-fabricated flues are easily identifiable by a metal flue and terminal on the roof and a metal flue box behind the fire.

Pre-Cast Flue

Pre-cast flues can be identified by a ridge vent or metal flue tube and terminal on the roof. Constructed from concrete or clay blocks they form a rectangular section flue. All Flavel fires featuring this icon are only suitable for Pre-Cast flues conforming to BS EN 1858.

Can't see a Chimney or Flue?

If you can't see a chimney or flue like the ones described on the left, then you will require a Balanced Flue.

Balanced Flue

Balanced Flue fires use a horizontal pipe to vent directly outside. An electricity supply is not required for Balanced Flue products.

Gas Supply

Your gas supply will either be natural gas or LPG, depending on the area in which you live.

Natural Gas

If you have a gas meter then you will have natural gas.

LPG

LPG is the most popular alternative to natural gas.

Controls

Manual Control

A simple and discreet control system located behind the fire's trim or fret on inset fires and the bottom right side on outsets.

Semi Remote Control

Light the fire using the manual control system then use the remote control handset to adjust the flame height and heat output.

Slide Control

Convenient control that eliminates the necessity of bending down.

Electronic Flame Control

Discreet easy access buttons are used to ignite the fire and adjust heat and flame height.

Top Control

A push down and twist ignition and control located on the top of outset fires means you don't have to bend down to light the fire.

Remote Control with Thermostat

The remote control handset can be used to light the fire as well as to adjust the flame height and heat output. Thermostatic control function can also regulate room temperature.

Remote Control

The remote control handset is used to light the fire as well as adjust the flame height and heat output.

Electronic Top or Side Control System

Both ignition and heat are controlled by a single rotary motion to light the fire. These easy to use controls are now available on our best selling radiant outsets. Requires an AA battery.

Curve

The Curve "hang-on-the-wall" fire with its sleek lines, textured fascia and glass front, complements the unique flame pattern created by an undulating back panel. This stunning fire is easy to install as it literally hangs on the wall, rather than slotting into the structure. The Curve is perfectly suited to contemporary homes requiring state-of-the-art appearance and the performance to match.

Sophia Suite

The Sophia suite features a large high efficiency gas fire, and is framed with a beautifully designed Royal Botticino marble surround. This suite benefits from a non reflective glass front, that delivers an uninterrupted view of the log fuel effect.

This suite is available in a conventional flue or slimline balanced flue version, and is operated by a multifunctional remote control handset. The remote control system includes a thermostatic operation which automatically adjusts the heat output up or down to maintain your desired pre-set temperature. There is also a wake/sleep timer function which lets you specify when the fire will automatically turn on and turn off.

For optimum efficiency the Sophia comes with a built in electronic fan that is used to circulate convected heat around the room.

Calculating your Flavel gas fires running costs

Windsor Traditional HE brass Page 23

Despite rising fuel prices, natural gas remains the most common and one of the cheapest ways to heat your home.

Since the cost of gas can differ depending on service provider, location and tariff we do not include estimated running costs for our products. However, you can estimate your own running costs easily using the following calculation:-

kW

MAXIMUM

HEAT INPUT

X

£

YOUR GAS

TARIFF

X

0.00

RUNNING

TIME

=

£

RUNNING

COST

Shown for
your model in
this brochure

Can be found
on your
latest gas bill

The length of
time your fire
is turned on.

Example

What is the running cost of the Windsor Traditional HE when used for 3 hours at a cost of 4.2p per kilowatt hour?

4.0kW
