Historically green efficient stoves

Welcome to Portway Stoves

At Portway Stoves we understand how important it is to create a stylish and relaxing living environment. That's why we've developed this collection of Multifuel, Wood, Gas, and Electric Stoves to complement all tastes and lifestyles.

I believe our success stems from a combination of innovative design, investment in technology and the highest quality manufacturing standards. As a result I have total confidence and belief in the quality and durability of the product range, and to ensure you receive the very best advice and after sales service, our experienced Portway retailers are fully trained to assist you with your purchase. This brochure has been designed to make choosing your new Portway stove as simple as possible.

I hope you will find it both informative and inspiring.

Wherever you see this symbol, use the QR code scanner app on your smartphone or mobile device to watch a short video of this stove.

Charles Portway Founding father of energy efficiency

In the early 1800s the owner of an ironmongery store took inspiration from the very first enclosed metal stoves which appeared in North America at the end of the 1700s and custom built his own stove to heat his Halstead based store.

Soon, a neighbouring shopkeeper asked Charles Portway to build him a stove to heat his store. Shortly afterwards he set up a small foundry manufacturing his Portway solid fuel stove. The stoves became highly successful and remained a very similar design until the 1980's.

The beauty behind the success of Portway's stoves was in their efficiency and they burned so slowly that they extracted the maximum amount of heat from the fuel. They were named 'Tortoise' stoves and proudly produced with the motto 'Slow but Sure' displayed on the front. These were the first heating appliances to offer fuel efficiency as a major selling point making their role in the development of our industry of great significance today. Robert Higgs, the chief executive of the Heating and Ventilating Contractors Association argues that Portway was the "founding father of energy efficiency".

Portway's stoves were used to heat churches and halls as well as homes and 19th Century stoves displaying the iconic 'Tortoise' trademark can still be found today, making them one of the oldest, most resilient products in the history of heating.

Complete peace of mind

Portway solid fuel and gas stoves are designed, manufactured, tested and independently approved to British Standards. The Portway brand holds a reputation for excellent quality, operational reliability, and high performance efficiency. Our stoves are reliable and efficient, that is why we offer a 10 Year Guarantee for complete peace of mind reassurance.

Product Approval Scheme

Products approved by the HETAS Cleaner Choice scheme are independently proven to meet the most stringent emissions criteria, exceeding Ecodesign and DEFRA Exemption requirements. HETAS Cleaner Choice scheme achieve a 50% improvement on particulates against currently recognised requirements within UK Smoke Control Areas.

Ecodesign 2022

Portways next generation of Clean Burn Stoves deliver exceptional standards for fuel efficiency and ultra-low emissions. These high performance stoves ensure smoke emissions and particulates are minimised to exceed clean air environmental restrictions for installation suitability into urban and rural areas.

DEFRA Smoke Control Exempt

Exemption is only given to independently tested stoves that demonstrate excellent clean burning combustion standards when burning wood and authorised smokeless fuels in a Smoke Control Area. Portway Stoves are so efficient and clean burning they have received the Clean Air Act Approval from DEFRA. Portway Stoves can also be used in smoke free zones in the Republic of Ireland when burning wood or peat briquettes.

Solid Fuel Stoves

Multifuel and Woodburning Stoves carry a ten year guarantee against material and manufacturing defects on the stove body. Cast iron parts are guaranteed for two years, consumable and glass components are guaranteed for a period of one year against material defects, and are subject to the terms and conditions as specified in the guarantee document supplied with the product.

Gas stoves

Gas stoves carry a 10 year guarantee against manufacturing and material defects including parts and labour, and is subject to Portway's conditions of guarantee. These include an annual service and annual replacement of the oxypilot assembly.

Electric Stoves

Celsi electric stoves provide versatile heating for any room in your home simply by plugging into the nearest mains socket. A simple to operate experience with optimal energy saving performance and assurance. We are confident you are getting a product that is built to last. 2 Year Guarantee.

Product Testing & Certification

Our Gas stoves are independently tested to BS EN 613, approved and verified by the British Standards Institution (BSI). BSI is an independent organisation and are internationally recognised for their technical expertise, quality services and in-depth knowledge of gas and electrical testing certification. The wide-ranging capability of their testing facilities and the broad expertise and knowledge of their staff ensures our products are rigorously tested with the utmost integrity.

Ecodesign Compliant

This logo signifies that Portway stove products are fully compliant with the Eco design directive Commission Regulation (EU) 2015/1188.

Tested & Approved

All Portway Multifuel, and Wood burning solid fuel stoves are independently approved to BS EN 13240.

Intelligent design

Portway stoves are amongst the cleanest, most efficient and most easily controllable stoves available today.

High efficiency

Our stoves carry a minimum Class A rating with a maximum energy efficiencies of up to 84%.

Our stoves have been specifically engineered to be simple in design, easy to use and still produce the lowest levels of carbon monoxide emissions, making them exceptionally clean burning.

The Portway Stoves range is specifically engineered to be simple in design, easy to use and produce the lowest levels of carbon monoxide emissions. The result is a collection of beautiful looking and exceptionally clean burning appliances.

All stoves needs air to breathe. There must be a permanent fresh air supply into the space in which it is installed equal to 550mm for each kW of nominal output. This can often be provided by natural drafts or air leaking around door frames etc. It is commonly accepted that this alone may suffice for appliances up to 5kW, but in any case of doubt, fit a purpose-made air vent. Consult with your Hetas installer for more advice on adequate ventilation and the requirements of a Carbon Monoxide monitor.

Portway 1 & 2 models offer a Direct Vent Kit* which means that the correct amount of ventilation is drawn directly into the stove without the need for any additional draughty and unsightly airbricks. Please ask your stockist for further details. Portway's design success can be merited to over 150 years of experience and a dedicated team of research engineers who are amongst the brightest in the industry. As a result our solid fuel stoves are approved using the most sophisticated research and test systems in the industry. Each stove is made from 96% easily recyclable material and all cast parts, such as doors and grates, are manufactured from 70% recycled iron.

*Can only be used when the stove is installed against an external wall

Features at a Glance

Portway solid fuel stoves have been built with the following design and functionality features.

Ultra slim, wide capacity

All Multifuel Stoves have been specifically designed to be ultra-slim in depth allowing them to be easily installed into existing fireplaces without the need for a protruding hearth. A large width allows for logs of 250mm

Flue outlet

Our free-standing stoves can be flued from the top or the rear and connect to standard 125mm (5") or 150mm (6") stove flue pipe.

Stove lining

A high density vermiculite lining for perfect combustion acting as insulation to limit the loss of heat through the back and sides of the stove and directs it through the front and towards the centre of the room.

Top quality finish

Our Portway steel stove bodies are made from 5mm thick steel and are one of the toughest, most robust on the market. Portway cast iron components are made from the finest quality cast iron. All stoves are finished with black paint. We are so confident in the quality of all our stove bodies that we

Large viewing window

The generous width provides a great flame viewing area for you to enjoy the mesmerising and calming effect of real burning flames.

Airwash system

A pre-heated Airwash system keeps the glass window clean and clear by passing a stream of intensely hot air down the inside of the glass preventing flames and combustion particles from having contact with the window.

Easy ashpan handling

Each stove has been designed to include an easy access, easy carry ashpan to make the disposal of ash as simple and mess free as possible. Ashpan not required on Luxima and Arundel XL MK2 Wood models.

Quaternary* and Tertiary Air System

Our quaternary and tertiary air supply uses the pressure difference generated inside the stove to draw in air at very high velocity through precision laser-machined spiracles. Fuel smoke particles are reignited in mid-flight causing additional flame combustion generating more heat and emitting fewer harmful chemicals into the atmosphere.

*Luxima model only

Simple operating controls

Heat output can be easily adjusted using simple and reliable aeration control.

Secure fixings

Bolt fixings are safely and securely fixed to the hearth before being fastened to the stove.

Solid Fuel Stoves

Portway's range of Multifuel and Woodburning Stoves are dependable clean burning appliances designed to provide your home with an effective controllable level of heat.

Environmental sense

Burning wood is friendly to the environment. Choosing wood to heat our homes helps us to preserve fossil fuel levels and protect valuable earth resources for our future. Replanted trees grown for fuel provide a healthy self-sustaining fuel source, and a positive way to reduce CO₂ emissions that are harmful to the environment. Using correctly seasoned wood will increase heat output.

New green timber is not recommended as it carries excessive moisture and can produce unwanted smoke emissions.

Naturally efficient

Portway's R&D team has invested in developing and refining technology to meet the key objective of producing stoves that not only save energy but, as a result, keep running costs down. Our stoves carry a minimum Class A rating with energy efficiencies of up to 84%.

To achieve the cleanest burn time with maximum efficiency performance we recommend burning natural hard wood logs, and manufactured approved smokeless fuels. Portway stoves can also burn a wide range of other fuels including anthracite, peat briquettes, and other mineral fuels.

Genuine warmth

Portway Multifuel and Woodburning Stoves will provide you with warmth like no other energy source. Every burn period produces long lasting radiant heat that will maintain your comfort levels whilst returning high efficiency with low emissions when burning natural and renewable fuels.

Electric Stoves

View our latest range of Electric Virtual Reality Stoves with superior flame aesthetics. This latest patented design raises the appearance and functionality of electric stoves to a new level.

Electristove Virtual Reality

Conventional electric fires feature flames on a flat screen at the rear of the product, with E-VR Flame Projection Technology we create the flame illusion to the front, the centre, and the rear of the fuel bed. This creates a totally natural log stove effect.

Efficiency

Electric fires are 100% energy efficient, meaning all the heat they produce is pushed out into the room, as no heat is lost in a chimney or flue.

Electristoves are capable of operating the flame effect independently to the heat source. This means that if no warmth is required you can choose to enjoy the ambiance of your fireplace year-round, without heating your home. Costing only pennies to run the flame effect.

Versatile Heating

These beautifully crafted electric stoves feature design styles to accomodate both contemporary, and traditional home settings. Best of all with minimal installation you are free to enjoy your stove choice in any room in your home simply by plugging into the nearest mains socket.

Gas Stoves

For immediate warmth and comfort a Portway gas stove will fit right into your busy lifestyle providing instant heat without the requirement to reload fuel. At the push of a button you can instantly create a warm and welcoming atmosphere.

Easy to use

Simple controllability with convenience. Fuss free without any mess. Just a few of the many advantages of installing a High Efficiency gas stove from Portway. Operated by a fully automatic remote control handset, you set the temperature you want in your room whilst enjoying a highly realistic log fuel bed and flame pattern giving the look and feel of a real wood burning stove.

Efficiency

Portway continually developes gas technology to achieve the highest possible efficiency standards. Our gas stoves are designed for simple installation into homes with or without a conventional chimney or flue, and can achieve impressive energy efficiencies of up to 84.2%.

Portway is a brand with heritage and a reputation for the build quality and reliability of our appliances. BFM Europe has always had a reputation as a manufacturer of some of the most efficient gas fires on the market and now we are setting new industry standards with the Portway range of High Efficiency gas stoves exceptional heat output combined with lower running costs compared to standard gas stoves.

Safety

Your safety is our concern. Every Portway gas product undergos rigorous testing and certification designed to meet and exceed current legislation, but more importantly to give you complete peace of mind.

Our stoves are independently tested, approved and verified by the British Standards Institution (BSI) an independent testing authority recognised internationally for their technical expertise, quality services and in depth knowledge of gas testing and certification.

In addition, our gas stoves carry independently tested CE Approval to standard BS EN 613 and are fully compliant with the Eco design directive Commission Regulation (EU) 2015/1188. See page 5 for more information.

Advanced Features

THERMOSTATIC HEATING

Pre-set your heat comfort level for automatic temperature control via the handset.

TIMER FUNCTION

Programmable 7-day heating timer with hourly on/off

ISOFLAME

Independent flame effect capable of displaying in isolation when no heat is required from the appliance.

FLAME FUSION

Captivating Indigo blue flame feature creates a colourful impression by fusing soft and natural yellow flames with an attractive flare of blue flame intensity.

LED EFFICIENCY

Controllable flames and fuel bed brightness, our onboard LED's ensure effective energy saving low power consumption.

ECODESIGN COMPLIANT

Integrated design features for optimal energy saving performance and assurance.

The Arundel has been developed with aesthetics, efficiency and flexibility in mind. This robust steel bodied Multifuel stove has modern looks with a large clear viewing window that will provide plenty of lively flames. Suitable for most room settings the Arundel offers a heat output of 5kW and an energy efficiency of 82.5% allowing it to be both cost effective and heat efficient. The Arundel is suitable for use in Smoke Control Areas, as recommended by DEFRA.

FEATURES

- + Cast Iron door and grate

- + 125mm (5") top or rear flue connection
- + Approved to standard BS EN 13240

- + Weight 87kg

OPTIONAL EXTRAS

Options & Accessories page 46-47.

Specifications

Options & Accessories

Leg Extensions & Log Stores

P1 & P2 Contemporary Stoves have the option to be installed with additional overall height by fitting high legs, low legs, or a dedicated log storage unit. These extensions are designed to blend-in with the stove body, and create space for under-stove log storage. These options appeal to consumers wishing to create a modern standalone feature stove with log storage, and to assist with extra height when accommodating taller inglenook fireplaces.

High Legs (300mm) Part No. B-1029232

Low Legs (150mm) Part No. B-1029231

P1 Log Store Part No. B-1029233 P2 Log Store Part No. B-1029234

Cast Iron Output Reducer Bricks

Output reducer bricks reduce the internal volume of the stove, allowing less room for fuel and subsequently reducing the heat output. These are perfect if you prefer the look of a larger stove but don't require a heat output greater than 5.0kW

Suitable for:

P2 Contemporary Multifuel Stove Rochester 7 Multifuel Stove

Rochester 7 Reducer Bricks Part No. B-1039023

P2 Reducer Bricks Part No. B-1038991

Luxima Gas

Offset Flue Pipe available for conventional flue installations allowing the gas stove to be placed in a forward position, creating space and clearance behind the stove.

Closure Plate Trim Kit available for conventional flue installations creating a simple neat and tidy practical and aesthetically pleasing solution to seal and cover the existing fireplace opening.

Linerless Flue Kit suitable for integrally sound chimneys. Refer to detailed installation instructions before commissioning stove.

Offset Flue Pipe Part No. 1188-1028590

Closure Plate Trim Kit Part No. 1188-1028591

Linerless Flue Kit Part No. 1188-1028579

Portway Stove Thermometer

A Portway Stove Thermometer can be positioned magnetically on the stove pipe at 205-300mm above the stove. Use the guidelines zones on the thermometer to ensure your stove is burning at the most efficient temperatures, helping you to save costly fuel and to guard against overheating which can lead to chimney fires or damage to the stove. Supplied as standard on some models in the range.

Part No. B-164910

5 and 6 Inch Flue Collar

125mm (5") and 150mm (6") Cast iron flue collar suitable for P1 & P2 multifuel stoves.

5" Matte Black Flue Collar Part No. B-136370B

6" Matte Black Flue Collar Part No. B-125430B

5" Enamel Black Flue Collar Part No. B-136370EC

We recommend all our gas stoves are installed by a Gas Safe Registered engineer, and all Multifuel or Wood burning stoves are fitted by a HETAS registered engineer, in accordance with our installation and user manuals.

DISCLAIMER Our policy is one of constant development and improvement. We therefore reserve the right to revise designs and specifications of our products without formal notice, patents pending. We always recommend our products be viewed in an approved showroom before purchase. Whilst we have taken every care in the preparation of this brochure it is not intended to replace the installation manual which provides more detailed information. Photography is for illustration purposes only and although every effort has been made to ensure accurate reproduction of typical installations and flame pictures they may vary according to stove model and flue types. We accept no liability for any loss or damage arising directly or indirectly from the use of this brochure. We recommend that all our stoves are used in conjunction with central heating and not as a primary source of heat. In the interests of personal safety a suitable fireguard is recommended when children, the elderly and the infirm are present.
